Disc Line

COMPRESSAR® Disposable Discs

COMPRESSAR Discs are single-use, sterile products used with AVD's comprehensive line of COMPRESSAR Stands and handheld compression aids to help achieve femoral hemostasis. The disposable discs are affixed to the COMPRESSAR Stands to provide sterile contact with the patient and a safe, secure compression. All of the discs are latex-free and feature the patented V-notch design, which provides excellent visibility to the access site and clear guidance for proper placement of the compression device. All of the discs may be used for either arterial or venous procedures and are warranted.

Discs for the COMPRESSAR® StrongArm™ Systems

COMPRESSAR StrongArm Systems feature enhanced stability during femoral hemostasis, a result of improved materials in the 3-Finger Jack® and SuperComfort™ Discs and increased strength designed into the StrongArm Stands. Rounded edges promote patient comfort. These sterile, disposable discs all include a biocompatible, 'sure-grip' elastomeric material which helps ensure safe, effective deployment.
